

Notification of Internal Structure Modification for YCB6H-63

Dear colleagues and partners,

In order to continuously meet market demands and optimize supplier lead times, we have made modifications to the YCB6H-63 product. Below are detailed information regarding the product changes: Changes have been made to the 1P, 2P, 3P, and 4P products of the YCB6H-63 series. The main modification involves the handle connection, transitioning from the original tension spring mechanism to a compression spring mechanism. A specific comparison of the internal structures is shown in the figure below.

This change will be completed after October 15, 2024. During this period, orders can still be placed for the old product. Suppliers will provide the new product when ordering then, and there will be no changes to the material number.
