Low-voltage switchgear and controlgear - Part 4-1: Contactors and motor-starters -Electromechanical contactors and motor-starters Part 2: Circuit-breakers

TCF Reference No	TLZJ24071660125
Prepared by (+ signature):	Stephen Zhang / Testing Engineer
Approved by (+ signature):	Cosco Yu / Technical Manager
Date of issue:	July 19,2024
The third party:	Shanghai Global Testing Services Co., Ltd.
Address:	Floor 2nd, Building D-1, No. 128, Shenfu Road, Minhang District, Shanghai, China.
Reviewing procedure	CE
Applicant's name	Zhejiang Changcheng Trading Co., Ltd.
Address:	DianHou Village, Liushi Town, Yueqing City, Zhejiang, China
Manufacturer's name	Changcheng Electrical Group Zhejiang Technology Co., Ltd.
Address:	DianHou Village, Liushi Town, Yueqing City, Zhejiang, China
Factory's name:	Same as manufacturer
Address:	Same as manufacturer
TCF specification:	
Standard:	⊠ EN IEC 60947-4-1:2019, EN IEC 60947-4-2:2023
Non-standard TCF method:	N/A
Review item description:	Soft Starter
Trade Mark:	1
Model/Type reference:	YCQR2-5.5 5.5kW, YCQR2-7.5 7.5kW, YCQR2-011 11kW, YCQR2-015 15kW, YCQR2-18.5 18.5kW, YCQR2-022 22kW, YCQR2-030 30kW, YCQR2-037 37kW, YCQR2-045 45kW, YCQR2-055 55kW, YCQR2-075 75kW, YCQR2-090 90kW, YCQR2-115 115kW, YCQR2-132 132kW, YCQR2-160 160kW, YCQR2-185 185kW, YCQR2-200 200kW, YCQR2-250 250kW, YCQR2-280 280kW, YCQR2-320 320kW, YCQR2-350 350kW, YCQR2-400 400kW, YCQR2-500 500kW
Main Model	YCQR2-022 22kW
Ratings (for the Electrical Equipment)	Rated current: 45A, Control voltage: AC220V, Rated voltage: AC380V, Frequency:50 Hz
Other information	N/A

Page 2 of 82

Review item particulars(for the Electrical Equipment):	
Classification of installation and use:	Stationary
Supply Connection:	Terminal
Electrical safety class:	1
IP number:	1
Switch:	Yes
Thermostat:	No
Thermal cut-out:	No
Electronic circuit:	Ι
Timer:	No
Heating elements:	No
Motor:	No
Low voltage motor:	No
Accessories provided:	Yes
Portable appliance:	No
Attachment type:	No
Possible review case verdicts:	
-review case does not apply to the test object:	N/A
- review object does meet the requirement:	P(Pass)
- review object does not meet the requirement:	F(Fail)
Reviewing:	
Date of receipt of review item:	July 09,2024
Date (s) of performance of reviews:	July 09,2024 to July 19,2024
General remarks:	
The review results presented in this report relate only to This report shall not be reproduced, except in full, with	

ort shall not be reproduced, except in full, without the written approval of the Issuing the third party I his rep "(see Enclosure #)" refers to additional information appended to the report. "(see appended table)" refers to a table appended to the report.

Throughout this report a comma (point) is used as the decimal separator.

General product information:

Soft Starter YCQR2-022 22kW Review condition: Temperature: 25°C Relative humidity: 60% The review sample was a pre-production sample.

Summary of reviewing:

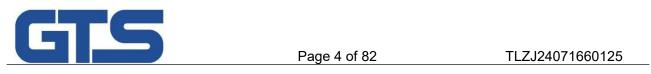

-The reviewed sample is found to comply with EN IEC 60947-4-1:2019, EN 60947-2:2017+A1:2020

General notes on tests:

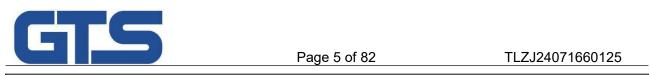

This review report include the following page(s):

National deviation of EU have been considered.

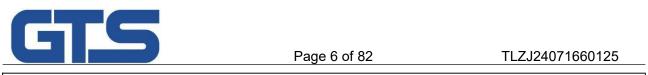

Annex I: Photo Documentation, 2 page(s).

	EN IEC 60947-4-1	
5.2	MARKING	-
	Data shall be preferably marked on the equipment:	-
	a – manufacturer's name or trade mark Changcheng Electrical Group	Р
	Zhejiang Technology Co., Ltd.	
	b – type designation or serial number	Р
	c - number of this standard, if the manufacturer 60947	Р
	claims compliance	
	k - IP code, in case of an enclosed equipment	Ν
	Data shall be included on the nameplate, or on the equipment, or in the	Р
	manufacturer's published literature:	
	d – rated operational voltages	Р
	e - utilization category and rated operational	Р
	currents (or rated powers), at the rated	
	operational voltages of the equipment	
	f - either the value of the rated frequency/ies, or	Р
	the indication d.c. (or symbol):	
	g - rated duty with the indication of the class of	Р
	intermittent duty, if any	
	Associated values:	Р
	h - rated marking and breaking capacities (these	Р
	indications may be replaced, where applicable, by	
	the indication of the utilization category, see table	
	7)	
	Safety an installation:	Р
	i – rated insulation voltage	Р
	j – rated impulse withstand voltage	Р
	I – pollution degree	Р
	m – rated conditional short-circuit current and type of co-ordination of contactor or	Р
	starter and type, current rating and characteristics of the associated SCPD:	
	m – rated conditional short-circuit current of the	Р
	combination starter or the protected starter	
	n – switching overvoltages	Р
	Control circuits	Р

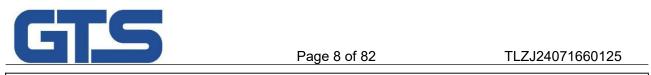

EN IEC 60947-4-1	1
The following information concerning control circuits shall be placed either on the	P
coil or on the equipment:	
o – rated control circuit voltage (Uc), nature of	P
current and rated frequency	
p - if necessary, nature of current, rated	P
frequency and rated control supply voltages (Us)	
Air supply systems for starter or contactors operated by compressed air	Р
Q – rated supply systems of the compressed air	N
and limits of variation of this pressure, if they are	
different from those specified in 8.2.1.2	
Auxiliary circuits:	-
r – ratings of auxiliary circuits	N
Overload relays and releases:	N
s – characteristics according to 5.7	N
Additional information for certain types of contactor and starter:	N
Rheostatic starters:	N
t – circuit diagram	N
u – severity of start, see 5.3.5.5.1	N
v – starting time, see 5.3.5.5.1	N
Auto-transformer starters:	-
w – rated starting voltage(s), i.e. voltage(s) at the	N
tapping terminals	
Vacuum contactors and starters:	N
x – maximum permissible altitude of the site of	N
installation, if less than 2000 m	
EMC	-
y – environment B or A: see 7.3.1 of part 1	Р
z – special requirements, if applicable, for	Р
example shielded or twisted conductors	
Sub clause 5.2 of part 1 applies to contactors, starters and overload relays with	-
the following additions:	
Data under items d) to x in 6.1.2 shall be included	Р
on the nameplate or on the equipment or in the	
manufacturer's published literature:	

	EN IEC 60947-4-1		
	In case of electronically controlled		Р
	electromagnets, information other than given in o)		
	and p) of 6.1.2 may also be necessary: see 5.5		
	and annex E		
	Data under items c) and k) in 6.1.2 shall		Р
	preferably be marked on the equipment		
6.3	Instruction for installation, operation and maint	enance	-
	The manufacture shall specify, in his documents		Р
	or catalogues:		-
	- the conditions for installation, operation and		Р
	maintenance, if any, of the equipment during		
	operation and after a fault		
	- the specify the measures to be taken with		Р
	regard to EMC, if any,		
	- equipment only suitable in environment A shall		Р
	provided with the following notice		
	- if necessary, the instructions for transport,		Р
	installation and operation of the equipment shall		
	indicate the measures that are particular		
	importance for the proper and correct installation,		
	commissioning and operation of the equipment.		
	- manufacturer advice on the measures to be		Р
	taken in the event of a short-circuit		Г
	In case of protected starters (see 3.2.8), the		Р
	manufacturer shall also provide the necessary		Г
8.1	mounting and wiring instruction		
8.1.1	Materials (see 7.1.1)		P
	Resistance to abnormal heat and fire (according to		P
	7.1.1.1 of IEC 60947-1) of insulating current-		
7.10	carrying parts Resistance to heat		
7.10	CB sufficiently resistant to heat		Р
9.14	Test of resistance to heat	<u> </u>	· ·
9.14.1	Test:		P
-	- without removable covers		P

	EN IEC 60947-4-1	1
	- removable covers1 h (70 \pm 2) °C	P
	After the test no access to live parts, marking still legible	P
9.14.2	Ball pressure test for external parts of insulating material (parts retaining current-carrying parts and parts of the protective circuit in position) $T = 125^{\circ}C$ Ø of impression $\leq 2 \text{ mm}$	P
8.14.3	Ball pressure test for external parts of insulating material (parts not retaining current-carrying parts and parts of the protective circuit in position $T = (70 \pm 2)^{\circ}C$ or $T = \ \circ C = (40 \pm 2)^{\circ}C + max$. temperature rise of sub-clause 8.8 Ø of impression ≤ 2 mm	P
8.11	Resistance to abnormal heat and to fire	-
	External parts of insulating material shall not ignite or spread fire under fault or overload conditions	Р
9.15	Resistance to abnormal heat and to fire	-
	Glow wire test: No visible flame, no sustained glowing or flames and glowing extinguish within 30 s	Р
	external parts retaining current-carrying parts and parts of the protective circuit in position	Р
	all other external parts(650 ± 10)°C	Р
8.12	Resistance to rusting	-
	Ferrous parts adequately protected against rusting	Р
9.16	Test of resistance to rusting:	P
	- 10 min immersed in a cold chemica	P
		P
	No sign of rust	P
8.1.2	Current-carrying parts and their connection (see 7.1.2)	Р
8.1.3	CLEARANCES AND CREEPAGE DISTANCES	P
	CLAUSE 7.1.3 OF IEC 60947 APPLIES	Р
7.1.3	Clearances	P
	Rated impulse withstand voltage	Р
	Creepage distances	Р
	Pollution degree:	

	EN IEC 60947-4-1	
	Comparative tracking index (V):	
	Material group	_
	Rated insulation voltage Ui (V):	_
	Minimum creepage distances (mm)	_
	Measured creepage distances (mm):	Р
	In case Uimp is not indicated	Р
8.1.4	Actuator	Р
	Sub-clause 7.1.4 of part 1 applies when the	
	actuator is manually operated with the following	
	addition:	
	The operating handle of the manually operated	Р
	switching device of combination starter shall be	
	provided with means for padlocking it in the OFF	
	position.	
8.1.4.1	Insulation	Р
8.1.4.2	Direction of movement	Р
8.1.4.3	Mounting	Р
	Actuators mounted on removable panels or	Р
	opening doors are so designed that when the	
	panels are replaced or doors closed the actuator	
	will engage correctly with the associated	
	mechanism	
8.1.5	INDICATION OF CONTACT POSITION	-
8.1.5.1	Indication means, see 7.1.5.1 part 1 applies to	Р
	manually operated starters	
8.1.5.2	Indication by the actuator, see 7.1.5.1 part 1	Р
8.1.6	Additional safety requirements for equipment suitable for isolation, see clause 7.1.6.1 part 1 applies and the additions marked with *)	-
7.1.6.1	Additional constructional requirements:	Р
	- marking according to 5.2.	Р
	- indication of the position of the contacts	Р
	- construction of the actuating mechanism	Р
	- minimum clearances across open contacts (see Table XIII, Part 1) (mm):	—
	- measured clearances (mm)	Р
	- test Uimp across gap (kV)	Р

	EN IEC 60947-4-1		
	*) Devices provided with positions like trip position or stand-by positions which are not the indicated open position shall be clearly marked.		Р
	*) An indicator having only one position of rest shall not be considered as appropriate to indicate the position of the main contact.		Ρ
8.1.6.2	Supplementary requirements for equipment with provision for electrical interlocking with contactors or circuit-breakers:		
	Auxiliary switch is rated according to IEC 60947-5-1 (unless the equipment is rated AC- 23)		Р
	Time interval between opening of the contacts of the auxiliary contact and the contacts of the main poles: =20 ms		_
	Measured time interval (ms):		Р
	During the closing operation the contacts of the auxiliary switch closes after or simultaneously with the contacts of the main poles		Р
8.1.6.3	Supplementary requirements for equipment provide open position:	d with means for padlocking the	Р
	The locking means is so designed that it cannot be removed with the appropriate padlock(s) installed		р
	Test force F applied to the actuator in an attempt to operate to the closed position (N)		
	Rated impulse withstand voltage (kV):		
	Test Uimp on open main contacts at the test force		Р
8.1.7	Terminals		-
7.1.7.1	All parts of terminals which maintain contact and carry current shall be of metal having adequate mechanical strength	(see 8.2.4 below)	Ρ
	Terminal connections shall be such that	(see 8.2.4 below)	Р
	necessary contact pressure is maintained		
	Terminals shall be so constructed that the	(see 8.2.4 below)	Р
	conductor is clamped between suitable surfaces		
	without damage to the conductor and terminal		
	Terminal shall not allow the conductor to be	(see 8.2.4 below)	Р
	displaced or to be displaced themselves in a		
	manner detrimental to the operator of equipment		
	and the insulation voltage shall not be reduced		
	below the rated value

	EN IEC 60947-4-1	
	clamping screws and nuts shall not serve to fix	P
	any other component	
8.1.7.4	Terminal identification and marking,	Р
8.1.7.4	Subclause 7.1.7.4 of part 1 applies with the	P
	additional requirements of annex A	
	terminal intended exclusively for the neutral	P
	conductor	
	protective earth terminal	P
	other terminals	Р
8.1.8	Additional requirements for equipment provided with a neutral pole	-
	Subclause 7.1.8 of part 1 applies	P
	marking of neutral pole	Р
	The switched neutral pole shall not break before	P
	and shall not make after the other poles	
	Conventional thermal current of neutral pole	Р
	If a pole having an appropriate short-circuit	P
	breaking and making capacity is used as a	
	neutral pole, then all poles, including the neutral	
	pole, may operate substantially together.	
	Equipment having a value lth < 63 A, this value	P
	shall be identical for all poles	
	For Ith > 63 A, the neutral pole may have a value	P
	of Ith different from that of the other poles, but not	
	less than the half that value or 63 A, whichever is	
	the higher.	
8.1.9	Provisions for protective earthing	
	Subclause 7.1.9 of part 1 applies	P
7.1.9.1	The exposed conductive parts shall be electrically	P
	interconnected and connected to a protective	
	earth terminal	
7.1.9.2	The protective earth terminal shall be readily	P
	accessible	
	The protective earth terminal shall be suitably	P
	protected against corrosion	

	EN IEC 60947-4-1		
	The electrical continuity between the exposed conductive parts of the protective earth terminal		Р
	and the metal sheathing of connecting conductors The protective earth terminal shall have no other functions		Р
7.1.9.3	Protective earth terminal marking and identification		Р
8.1.10	Enclosure for equipment		-
7.1.10.1	Design	1	-
	Subclause 7.1.9 of part 1 applies with the follow additions		Р
	Starting resistors mounted within an enclosure shall be so located or guarded that issuing heat is not detrimental to other apparatus and materials within the enclosure.		Ρ
	For the specified case of combination starters, the cover or door shall be interlocked so that it cannot be opened without manually operated device being in open position.		Ρ
	However, provision may be made to open the door or cover with the manually operated switching device in the ON position by use of a tool.		Р
	The enclosure, when it is opened: all parts requiring access for installation and maintenance are readily accessible		Р
	Sufficient space shall be provided inside the enclosure		Р
	The fixed parts of a metal enclosure shall be electrically connected to the other exposed conductive parts of the equipment and connected to a terminal which enables them to be earthed or connected to a protective conductor		Ρ

	EN IEC 60947-4-1	
	Under no circumstances shall a removable metal	Р
	part of the enclosure be insulated from the part	
	carrying the earth terminal when the removable	
	part is in place	
	The removable parts of the enclosure shall be	Р
	firmly secured to the fixed parts by a device such	
	that they cannot be accidentally loosened or	
	detached owing to the effects of operation of the	
	equipment or vibrations	
	When an enclosure is so designed as to allow the	P
	covers to be opened without the use of tools,	
	means shall be provided to prevent loss of the	
	fastening devices	
7.1.10.2	Insulation	-
	If, in order to prevent accidental contact between	Р
	a metallic enclosure and live parts, the enclosure	
	is partly or completely lined with insulating	
	material, then this lining shall be securely fixed to	
	the enclosure	
8.1.11	Degree of protection of enclosed contactors and starters	N

	limits of close satisfactorily at any value between	Р
	85% and 110% of rated control supply voltage	
	Us:	
	limits of drop out and open fully are: 75% to 20%	Р
	for a.c. and 75% to 10% for d.c	
	ambient temperature(-5 °C) for 100% Us	Р
	limits of close satisfactorily at any value between	Р
	85% and 110% of rated control supply voltage	
	Us:	
	Limits of drop out and open fully are: 75% to 20%	Р
	for a.c. and 75% to 10% for d.c	
8.2.1.2.2	Contactors and starters with electronically controlled electromagne	t P
	Rated control supply voltage Us (V)	_
	Frequency (Hz)	
	Declared ambient temperature(>40 °C) for 100%	Р
	Us	
	Limits of close satisfactorily at any value between	Р
	85% and 110% of rated control supply voltage	
	Us	
	Limits of drop out and open fully are: 75% to 20%	Р
	for a.c. and 75% to 10% for d.c	
	Ambient temperature(-5 °C) for 100% Us	Р
	Limits of close satisfactorily at any value between	Р
	85% and 110% of rated control supply voltage	
	Us:	
	Limits of drop out and open fully are: 75% to 20%	Р
	for a.c. and 75% to 10% for d.c	
8.2.1.2.3	Electro-pneumatic contactors and starters	Р
	Rated air supply pressure(Bar)	
	Declared ambient temperature(>40 °C) for 100%	Р
	of the rated air supply pressure(Bar)	
	Limits of close satisfactorily at any value between	Р
	85% and 110% of rated air supply	
	pressure(Bar)	

	EN IEC 60947-4-1	
	Limits of drop out and open fully are: 75% to 10%	Р
	of rated air supply pressure(Bar)	
	Ambient temperature(-5 °C) for 100% of the rated	Р
	air supply pressure(Bar)	
	Limits of close satisfactorily at any value between	Р
	85% and 110% of rated air supply	
	pressure(Bar) :	
	Limits of drop out and open fully are: 75% to 10%	Р
	for the rated air supply pressure(Bar)	
8.2.1.2.4	Capacitive drop out test	P
	A capacitor shall be inserted in series in the	Р
	supply circuit U_s , the total length of the	
	connecting conductors being = 3 m.	
s	The capacitor is short-circuit by a switch of	Р
	neglible impedance.	
	The supply voltage shall then be adjusted to	Р
	110 % Us:	
	The value of the capacitor shall be calculated:	Р
	C (nF) = 30 + 200000 / (f x U _s):	
	Verification of the drop out of the contactor when	Р
	the switch is operated to the open position	
9.3.3.2.2	Relays and releases	-
8.2.1.3	Operation of under-voltage relays and releases	P
	type of under-voltage relay	Р
	Rated control supply voltage(U)	P
	Frequency (Hz)	Р
	Limits of drop out and fully open at slowly falling voltage are 70 % and 35 % of the rated voltage :	Р
	Prevent to close if supply voltage < 35 % of the rated voltage	Р
	Limits of close satisfactorily at any value between 85 % and 110 %	Р
8.2.1.4	Shunt-coil operated releases (shunt trip)	-
	Tripping of shunt release measured during the tripping operation between 70 % and 110 % of the rated control supply voltage and if a.c. at rated frequency	P

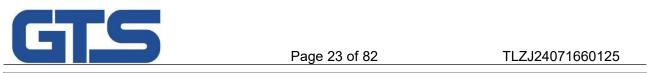

8.2.1.5	EN IEC 60947-4-1	Р
	Conditions for thermal and time-delay magnetic overload relays only:	
8.2.1.5.1	Limits of operation of time-delay overload relays when all poles are energized	P
	type of time-delay overload relay	-
	trip class	-
	current setting	-
	ambient temperature (°C)	-
	test enclosure W x H x D (mm x mm x mm):	-
	cable/busbar cross-section (mm²) / (mm):	-
	at A times of current setting, tripping shall not occur in less than 2 h starting from the cold state; test current	-
	when the current is subsequently raised to B times the current setting, tripping shall occur in less than 2 h; test current	-
	for class 10A overload relays energized at C times the current, tripping shall occur in less than 2 min, starting from thermal equilibrium at the current setting; test current	-
	For class 10, 20 or 30 overload relays energized	-
	at C times the current, tripping shall occur in less	
	than 2, 8 or 12 min, starting from thermal	
	equilibrium at the current setting; class; test	
	current; tripping time	
	At D times the current setting, tripping shall occur	-
	within the tripping time (s) < Tp <, starting from	
	the cold state; test current; tripping time Tp (s):	
	ambient temperature: - 5 °C	Р
	at A times of current setting, tripping shall not	-
	occur in less than 2 h starting from the cold state;	
	test current	
	when the current is subsequently raised to B	-
	times the current setting, tripping shall occur in	
	less than 2 h; test current	
	for class 10A overload relays energized at C	-
	times the current, tripping shall occur in less than	
	2 min, starting from thermal equilibrium at the	
	current setting; test current	

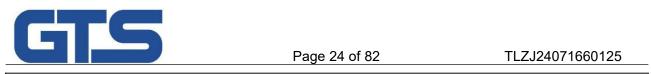

EN IEC 60947-4-1	
for class 10, 20 or 30 overload relays energized	-
at C times the current, tripping shall occur in less	
than 2, 8 or 12 min, starting from thermal	
equilibrium at the current setting; class; test	
current; tripping time	
at D times the current setting, tripping shall occur	-
within the tripping time (s) < Tp <, starting from	
the cold state; test current; tripping time Tp (s):	
ambient temperature: + 40 °C:	-
at A times of current setting, tripping shall not	-
occur in less than 2 h starting from the cold state;	
test current	
when the current is subsequently raised to B	-
times the current setting, tripping shall occur in	
less than 2 h; test current	
for class 10A overload relays energized at C	-
times the current, tripping shall occur in less than	
2 min, starting from thermal equilibrium at the	
current setting; test current	
for class 10, 20 or 30 overload relays energized	-
at C times the current, tripping shall occur in less	
than 2, 8 or 12 min, starting from thermal	
equilibrium at the current setting; class; test	
current; tripping time	
at D times the current setting, tripping shall occur	-
within the tripping time (s) < Tp <, starting from	
the cold state; test current; tripping time Tp (s):	
Limits of operation of three-pole thermal overload relays ene	ergized on two poles: -
ambient temperature (°C)	-
the relay energized on three poles, at A times the	-
current setting, tripping shall not occur in less	
than 2 h, starting from the cold state; test current :	

	EN IEC 60947-4-1		
	when the value of the current flowing in two poles is increased to B times the current setting and the		-
	third pole deenergized, tripping shall occur in less than 2 h; current value; test current		-
8.2.1.5.3	Limits of operation of instantaneous magnetic overlo	pad relays	P
	For all values of the current setting, instantaneous magnetic overload relays shall trip with an accuracy of ± 10% of the value of the published current value corresponding to the current setting		Р
	Current setting Magnetic settings		Р
	Accuracy ± 10% of the value:		Р
8.2.1.5.4	Limits of operation of automatic change over by und	er-current relays	Р
	 for star-delta starters from star to delta, and for auto-transformer starters from the starting to the ON position 		Р
	The lowest drop-out of an under-current relay shall be not greater than 1,5, times the actual current setting of the overload relay which is active in the starting or star connection.		Р
	The under-current real shall be able to carry any value of current , from its lowest current setting to stalled current in the starting position or the star connection, for the tripping times determined by the overload relays at its highest current setting		Ρ
9.3.3.4	Test of dielectric properties, impulse withstand voltage	ge (Uimp indicated):	Р
	- verification by measurement of clearances instead of testing		P
	- rated impulse withstand voltage (V)		_
	- test Uimp main circuits (kV): - test Uimp auxiliary circuits (kV):		P P
	Test of dielectric properties, dielectric withstand volta - rated insulation voltage (V)	age (Uimp not indicated):	-

	EN IEC 60947-4-1	
	- main circuits, test voltage for 5 s (V)	Р
	- control and auxiliary circuits, test voltage for 5-s (V)	Р
	- circuits of equipment include devices such as motors, instruments ect, test voltage for 5 s (V):	Р
	Equipment suitable for isolation	Р
	The leakage current shall be measured through each pole with the contacts in open position(< 0,5 mA)	Р
9.3.1.B	TEST SEQUENCE II	-
	- verification of read making and breaking capacities, change-over ability and reversibility, where applicable (Clause 9.3.3.5.)	Р
	- verification of conventional operational performance (Clause 9.3.3.6)	Р
9.3.3.5	Making and breaking capacity	P
	Conditions, make operations only	P
	Type of product	Р
	utilization category	_
	Control voltage 25 times at 110% and 25 times at 85% for AC-3 and AC-4	Р
	rated operational voltage Ue (V):	
	rated operational current le (A) or power (kW):	
	- test voltage U/Ue = 1,05 (V):	
	- test current I/Ie = (A)	
	- power factor/time constant	
	- on-time (ms)	
	- off-time (s)	
	- number of make operations	Р
	Behaviour and condition during and after the test:	Р
	- no permanent arcing	Р
	- no flash-over between poles	Р
	- no blowing of the fusible element in the earth circuit	Р
	- no welding of the contacts	P

	EN IEC 60947-4-1	
	- the contacts shall operate when the contactor or	Р
	starter is switched by the applicable method of	
	control	
	Conditions, make/break operations only	Р
	Type of product:	Р
	utilization category	-
	rated operational voltage Ue (V)	-
	rated operational current le (A) or power (kW):	-
	For starters incorporated two contactors, 2	-
	contactor shall be used with the follow sequence:	
	Close A – open A – close B – open B- off period	
	- test voltage U/Ue = 1,05 (V)	
	- test current I/Ie = (A)	
	- power factor/time constant:	
	- on-time (ms)	
	- off-time (s):	
	Characteristic of transient recovery voltage for AC-3 and AC-4 only:	Р
	oscillatory frequency (kHz)	
	Measured oscillatory frequency (kHz)	Р
	Factory:	Р
	Behaviour and condition during and after the test:	Р
	- no permanent arcing	Р
	- no flash-over between poles	Р
	- no blowing of the fusible element in the earth	Р
	circuit	
	- no welding of the contacts	Р
	- the contacts shall operate when the contactor or	Р
	starter is switched by the applicable method of	
	control	
9.3.3.6	Operational performance capability:	Р
	Type of product	Р
	utilization category	
	rated operational voltage Ue (V)	
	rated operational current le (A) or power (kW):	
	Conditions, make/break operations:	Р

	EN IEC 60947-4-1	
	- test voltage U/Ue = 1,05 (V)	
	- test current I/Ie = (A)	
	- power factor/time constant	
	- on-time (ms):	
	- off-time (s)	
	- number of make/break operations	Р
	Characteristic of transient recovery voltage for AC-3 and AC-4 only:	Р
	oscillatory frequency (kHz)	
	Measured oscillatory frequency (kHz)	Р
	Factor y	Р
	Behaviour and condition during and after the test:	Р
	- no permanent arcing	Р
	- no flash-over between poles	Р
	- no blowing of the fusible element in the earth	Р
	circuit	
	- no welding of the contacts	Р
	- the contacts shall operate when the contactor or	Р
	starter is switched by the applicable method of	
	control	
8.3.3.4	Dielectric verification	Р
	test voltage (2 Ui) for 1 min. (V)	Р
	No flashover or breakdown	Р
8.3.3.5	Leakage current equipment suitable for isolation	Р
	test voltage (1,1 Ue) (V)	Р
	Leakage current: ≤ 2 mA /pole:	P
8.3.4	TEST SEQUENCE III	Р
		Р
	- Performance under short-circuit conditions (Clause 9.3.4)	Р
		Р
9.3.4	Performance under short-circuit conditions	Р
	Contactors or starter and the associated SCPD,	Р
	or combination or protected starter are subjected	
	to tests 9.3.4.2.1 and 9.3.4.2.2.	
	Maximum le and of maximum for AC-3 are	Р
	covered	

	EN IEC 60947-4-1	1
	Rated control supply voltage	Р
9.3.4.2.1	Test at de prospective current "r":	Р

	the "I" and "O" positions and the direction of		
7.1.5	operation Indication of contact position		_
parti			_
7.1.5.1 part 1	Indicating means		-
	When an equipment is provided with means for indicating the closed and open positions, these positions shall be unambiguous and clearly indicated	Compliance	Р
	This is done by means of a position indicating device (see 2.3.18)	Compliance	Р
	If symbols are used, they shall indicate the closed and open position respectively, in accordance with IEC 60417-2:		-
	- 60417-2-IEC-5007 1 On (power)	Compliance	Р
	- 60417-2-IEC-5007 O Off (power)	Compliance	Р
	For equipment operated by means of two pushbuttons, only the push-button designated for the opening operation shall be red or marked with the symbol "O"		N/A
	Red colour shall not be used for any other pushbutton	-	N/A
	The colours of other push-buttons, illuminated push-buttons and indicator lights shall be in accordance with IEC 60073	-	N/A
7.1.5.2 part 1	Indication by the actuator		
	When the actuator is used to indicate the position of the contacts, it shall automatically take up or stay, when released, in the position corresponding to that of the moving contacts; in this case, the actuator shall have two distinct rest positions corresponding to those of the moving contacts, but for automatic opening a third distinct position of the actuator may be provided		P
7.1.6	Additional safety requirements for equipment suitable for isolation		-
7.1.6.1	Additional constructional requirements for equipment suitable for isolation (Ue > 50 V):		-
	Equipment suitable for isolation (see for y). Equipment suitable for isolation shall provide in the open position an isolation distance in acc. with the requirements necessary to satisfy the isolating function. Indication of the main contacts shall be provide by one or more of the following means:		-
	- the position of the actuator	Compliance	Р
	- a separate mechanical indicator	-	N/A
	- visibility of the moving contacts	-	N/A
	When means are provided or to lock the equipment in the open position, locking only be possible when contacts are in the open position	-	N/A
	Actuator front-plate fitted to the equipment in a manner witch ensures correct contact position indication and locking	-	N/A

	EN 60947-2		
	The indicated open position is the only position in witch the specified isolation distances between the contacts is ensured.	Compliance	Ρ
	- minimum clearances across open contacts (see Table XIII, Parti) (mm):		
	- measured clearances (mm):		Ρ
	- test Uimp across gap (kV):		Ρ
7.1.6.2	Supplementary requirements for equipment with provision for electrical interlocking with contactors or circuit-breakers:		
	auxiliary switch shall be rated according to IEC 60 947-5-1		J/A
	If equipment suitable for isolation is provided with an auxiliary switch for the purpose of electrical interlocking with contactor (s) or circuit-breaker(s) and intended to be used in motor circuits, the following requirements shall apply unless the equipment is rated for AC-23 utilization category		I/A
	The time interval between the opening of the contacts of the auxiliary switch and the contacts of the main poles shall be sufficient to ensure that the associated contactor or circuit-breaker interrupts the current before the main poles of the equipment open		I/A
	Unless otherwise stated in the manufacturer's technical literature, the time interval shall be not less than 20 ms when the equipment is operated according to the manufacturer" instructions	N	J/A
	Compliance shall be verified by measuring the time interval between the instant of opening of the auxiliary switch and the instant of opening of the main poles under no-load conditions when the equipment is operated according to the manufacturer's instructions	N	J/A
	During the closing operation the contacts of the auxiliary switch shall close after or simultaneously with the contacts of the main poles	- N	I/A
	A suitable opening time interval may also be provided by an intermediate position (between the ON and OFF position) at which the interlocking contact(s) is (are) open and the main poles remain closed	N	I/A
7.1.6.3	Supplementary requirements for equipment provided with means for padlocking the open position:		-
	the locking means shall be designed in such a way that it cannot be removed with the appropriate padlock(s) installed	- N	I/A
	Alternatively, the design may provide padlockable means to prevent access to the actuator		J/A
	test force F applied to the actuator in an attempt to operate to the closed position (N):	- N	J/A
	rated impulse withstand voltage (kV):	- N	I/A
	test Uimp on open main contacts at the test force	- N	J/A

		122324071	
	EN 60947-2		
7.1.7	Terminals		-
7.1.7.1	All parts of terminals which maintain contact and carry current shall be of metal having adequate mechanical strength	Compliance	Р
	Terminal connections shall be such that necessary contact pressure is maintained	Compliance	Р
	Terminals shall be so constructed that the conductor is clamped between suitable surfaces without damage to the conductor and terminal	Compliance	Р
	Terminal shall not allow the conductor to be displaced or to be displaced themselves in a manner detrimental to the operator of equipment and the insulation voltage shall not be reduced below the rated value	Compliance	P
7.1.7.2	Connection capacity		-
	type of conductors:		Р
	minimum cross-sectional area of conductor (mm ²):	_	Р
	maximum cross-sectional area of conductor (mm ²):	_	Р
	number of conductors simultaneously connectable to the terminal:		Р
7.1.7.3	Connection		
	terminals for connection to external conductors shall be readily accessible during installation	Compliance	Р
	clamping screws and nuts shall not serve to fix any other component	Compliance	Р
7.1.7.4	Terminal identification and marking		-
	terminal intended exclusively for the neutral conductor	-	N/A
	protective earth terminal	-	N/A
	other terminals	-	N/A
7.1.8 parti	Additional requirements for equipment provided with a neutral pole		
·	When an equipment is provided with a pole intended only for connecting the neutral, this pole shall be clearly identified to that effect by the letter N (see 7.1.7.4.).		N/A
	A switched neutral pole shall break not before and shall make not after the other poles	-	N/A
	For equipment having a value of conventional thermal current (free air or enclosed, see 4.3.2.1 and 4.3.2.2) not exceeding 63 A, this value shall		N/A
	be identical for all poles For higher conventional thermal current values, the neutral pole may have a value of conventional thermal current different from that of the other poles, but not less than half that value or 63 A, whichever is the higher		N/A
740	if a pole with a appropriate making and breaking capacity is used as a neutral pole, then all poles, incl. the neutral pole, shall operate substantially together.		N/A
7.1.9	Provisions for protective earthing The exposed conductive parts (e.g. chassis,		N/A
1.1.3.1	framework and fixed parts of metal enclosures)		

	EN 60947-2		
	other than those which cannot constitute a danger shall be electrically interconnected and connected to a protective earth terminal for connection to an earth electrode or to an external protective conductor		
part 1	This requirement can be met by the normal structural parts providing adequate electrical continuity and applies whether the equipment is used on its own or incorporated in an assembly		N/A
	Exposed conductive parts are considered not to constitute a danger if they cannot be touched on large areas or grasped with the hand or if they are of small size (approximately 50 mm x 50 mm) or are so located as to exclude any contact with live parts		N/A
7.1.9.2 part 1	Protective earth terminal		-
part	The protective earth terminal shall be readily accessible and so placed that the connection of the equipment to the earth electrode or to the protective conductor is maintained when the cover or any other removable part is removed		N/A
	The protective earth terminal shall be suitably protected against corrosion	-	N/A
	In the case of equipment with conductive structures, enclosures, etc., means shall be provided, if necessary, to ensure electrical continuity between the exposed conductive parts the equipment and the metal sheathing of		N/A
	connecting conductors The protective earth terminal shall have no other function, except when it is intended to be connected to a PEN conductor (see 2.1.1.5 - Note). In this case, it shall also have the function of a neutral terminal in addition to meeting the requirements applicable to the protective earth terminal		N/A
7.1.9.3	Protective earth terminal marking and identification		-
	The protective earth terminal shall be clearly and permanently identified by its marking	-	N/A
	The identification shall be achieved by colour (green-yellow mark) or by the notation PE, or PEN, as applicable, in accordance with IEC 60445, subclause 5.3, or, in the case of PEN, by a graphical symbol for use on equipment		N/A
	Graphical symbol to be used: 60417-2-IEC-5019® Protective earth (ground) in accordance with IEC 60417-2		N/A
7.1.10	Enclosure for equipment		-
7.1.10. 1	Design		-
	The enclosure, when it is opened: all parts requiring access for installation and maintenance are readily accessible	-	N/A
	Sufficient space shall be provided inside the enclosure	-	N/A

	0		
	EN 60947-2		
	The fixed parts of a metal enclosure shall be electrically connected to the other exposed		N/A
	conductive parts of the equipment and connected		
	to a terminal which enables them to be earthed or		
	connected to a protective conductor		
	Under no circumstances shall a removable metal		N/A
	part of the enclosure be insulated from the part		
	carrying the earth terminal when the removable		
	part is in place The removable parts of the enclosure shall be		N/A
	firmly secured to the fixed parts by a device such		IN/A
	that they cannot be accidentally loosened or		
	detached owing to the effects of operation of the		
	equipment or vibrations		
	When an enclosure is so designed as to allow the		N/A
	covers to be opened without the use of tools,		
	means shall be provided to prevent loss of the		
	fastening devices If the enclosure is used for mounting push-		N/A
	buttons, it shall not be possible to remove the	=	
	buttons from the outside of the enclosure		
7.1.10.	Insulation		
2			
	If, in order to prevent accidental contact between		N/A
	a metallic enclosure and live parts, the enclosure		
	is partly or completely lined with insulating material, then this lining shall be securely fixed to		
	the enclosure		
7.1.11	Degree of protection of enclosed equipment		-
	Degree of protection.		-
	Test for first characteristic.		-
	Test for first numeral		N/A
	Test for second characteristic		
	Test for second numeral		N/A
7.1.12 part 1	Conduit pull-out, torque and bending with metallic conduits		-
	Polymeric enclosures of equipment, whether		N/A
	integral or not, provided with threaded conduit		
	entries, intended for the connection of extra heavy duty, rigid threaded metal conduits		
	complying with IEC 60981, shall withstand the		
	stresses occurring during its installation such as		
	pull-out, torque, bending		
7.2	Performance requirements		-
7.2.1	Operating condition		-
7.2.1.1	Closing		-
	For a circuit-breaker to be closed safely on to the	Compliance	P
	making current corresponding to its rated short-		
	circuit making capacity, it is essential that it should be operated with the same speed and the		
	same firmness as during the type test for proving		
	the short-circuit making capacity		
7.2.1.1. 1	Dependent manual closing		-
•	For a circuit-breaker having a dependent manual		N/A
	closing mechanism, it is not possible to assign a		
	short-circuit making capacity rating irrespective of		

	1 490 40 01 02		
	EN 60947-2		
	the conditions of mechanical operation		
	Such a circuit-breaker should not be used in circuits having a prospective peak making current exceeding 10 kA	-	N/A
	However, this does not apply in the case of a circuit-breaker having a dependent manual closing mechanism and incorporating an integral fast- acting opening release which causes the circuit- breaker to break safely, irrespective of the speed and firmness with which it is closed on to prospective peak currents exceeding 10 kA; in this case, a rated short-circuit making capacity can be assigned		N/A
7.2.1.1. 2	Independent manual closing		-
	A circuit-breaker having an independent manual closing mechanism can be assigned a short- circuit making capacity rating irrespective of the conditions of mechanical operation	Compliance	P
7.2.1.1. 3	Dependent power closing		-
	At 110% of the rated control supply voltage, the closing operation performed on no-load shall not cause any damage to the circuit-breaker.	-	N/A
	At 85% of the rated control supply voltage, the closing operation shall be performed when the current established by the circuit-breaker is equal to its rated making capacity within the limits allowed by the operation of its relays or releases and, if a maximum time is stated for the closing operation, in a time not exceeding this maximum time limit.		N/A
7.2.1.1. 4	Independent power closing		
	A circuit-breaker having an independent power closing operation can be assigned a rated short- circuit making capacity irrespective of the conditions of power closing		N/A
7.0.4.4	Means for charging the operating mechanism, as well as the closing control components, shall be capable of operating in accordance with the manufacturer's specification		N/A
7.2.1.1. 5	Stored energy closing		-
	Capable ensuring closing of the circuit-breaker in any condition between no-load and its rated making capacity	-	N/A
	- when the stored energy is retained within the circuit-breaker, a device is provided witch indicates when the storing mechanism is fully charged.	-	N/A
	- means for charging the operating mechanism and closing control components operates when auxiliary supply voltage is between 85% and 110% of the rated control supply voltage.		N/A
	- not possible for the moving contacts to move	-	N/A

	EN 60947-2		
	from the open position, unless the charge is sufficient for satisfactory completion of the closing operation.		
	 by manually operated circuit-breaker is the direction of operation indicated, 	Ν	I/A
	(not for circuit-breaker with an independent manual closing operation.)	N	I/A
	 For trip free circuit-breaker it shall not be possible to maintain the contacts in the touching or closed position when the release is in the position to trip the circuit-breaker. 	N	J/A
7.2.1.2	Opening		-
7.2.1.2. 1	Circuit-breakers which open automatically shall be trip-free and, unless otherwise agreed between manufacturer and user, shall have their energy for the tripping operation stored prior to the completion of the closing operation	N	J/A
7.2.1.2. 2	Opening by undervoltage releases		-
7.2.1.3. a part 1	Operating voltage		-
	An under-voltage relay or release, when associated with a switching device, shall operate to open the equipment even on a slowly falling voltage within the range between 70% and 35% of its rated voltage	N	I/A
	An under-voltage relay or release shall prevent the closing of the equipment when the supply voltage is below 35% of the rated voltage of the relay or release; it shall permit closing of the equipment at supply voltages equal to or above 85% of its rated value	Ν	I/A
	Unless otherwise stated in the relevant product standard, the upper limit of the supply voltage shall be 110% of its rated value	- N	I/A
7.2.1.3. b part 1	Operating time		-
	For a time-delay under-voltage relay or release, the time-lag shall be measured from the instant when the voltage reaches the operating value until the instant when the relay or release actuates the tripping device of the equipment	Ν	I/A
7.2.1.2. 3	Opening by shunt releases	- N	I/A
7.2.1.4 part 1	Limits of operation of shunt releases		-
	A shunt release for opening shall cause tripping under all operating conditions of an equipment when the supply voltage of the shunt release measured during the tripping operation remains between 70% and 110% of the rated control supply voltage and, if a.c., at the rated frequency	1	N/A
7.2.1.5 part 1	Limits of operation of current operated relays and released		-
	Limits of operation of current operated relays and releases shall be stated in the relevant product	- 1	N/A

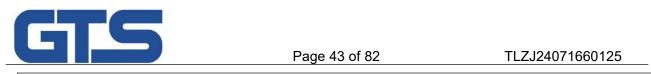

Page 42 of 82

	EN 60947-2		
	standard		
7.2.1.2. 4	Opening by over-current releases		-
a)	Opening under short-circuit conditions		-
	The short-circuit release shall cause tripping of the circuit-breaker with an accuracy of 20% of the tripping current value of the current setting for all values of the current setting of the short-circuit current release	Compliance	Р
	Where necessary for over-current co-ordination the manufacturer shall provide information (usually curves) showing	-	N/A
	- maximum cut-off (let-through) peak current as a function of prospective current (r.m.s. symmetrical)	Compliance	Р
	- <i>I2t</i> characteristics for circuit-breakers of utilization category A and, if applicable, B for circuit-breakers with instantaneous override (see not to 8.3.5)	Compliance	P
b)	Opening under overload conditions		-
1)	Instantaneous or definite time-delay operation	-	N/A
	The release shall cause tripping of the circuit- breaker with an accuracy of + 10% of the tripping current value of the current setting for all values of current setting of the overload release		N/A
2)	Inverse timer-delay operation		-
	At the reference temperature and at 1,05 times the current setting with the conventional non- tripping current, the opening release being energized on all poles, tripping shall not occur in less than the conventional time from the cold state, i.e. with the circuit-breaker at the reference temperature	Compliance	P
	Moreover, when at the end of the conventional time the value of current is immediately raised to 1,30 times the current setting, i.e. with the conventional tripping current, tripping shall then occur in less than the conventional time later	Compliance	Р
	If a release is declared by the manufacturer as substantially independent of ambient temperature, the current values of table 6 shall apply within the temperature band declared by the manufacturer, within a tolerance of 0,3%/K	Compliance	P
	The width of the temperature band shall be at least 10 K on either side of the reference temperature	Compliance	P
7.2.4.2	Operational performance capability		
7.2.4.2 part 1	The operational performance off-load for which the tests are made with the control circuits energized and the main circuit not energized, in order to demonstrate that the equipment meets the operating conditions specified at the upper and lower limits of supply voltage and/or pressure specified for the control circuit during closing and opening operations	Compliance	P
	The operational performance on-load during	Compliance	Р

a)	Application of test voltage		-
	i) Between all terminals of the main circuit connected together (incl. control and auxiliary circuits connected to the main circuit) and the enclosure or mounting plate, with the contacts in all normal positions of operation.	Compliance	P
	ii) Between all terminals of the main circuit and the other poles connected together and to the enclosure or mounting plate, with the contacts in all normal positions of operation.	compliance	P
	iii) Between each control and auxiliary circuit not normally connected to the main circuit and: - the main circuit	Compliance	Р
	- other circuits	-	N/A
	- exposed conductive parts	-	N/A
	- enclosure of mounting plate	-	N/A
	iv) equipment suitable for isolation	Compliance	Р
	equipment not suitable for isolation	-	N/A
	- no unintentional disruptive discharge during the test's	Compliance	Р
	Test of dielectric properties, dielectric withstand voltage (Uimp not indicated):		-
	- rated insulation voltage (V) :	-	N/A
	- main circuits, test voltage for 1 min (V)	-	N/A
	- auxiliary circuits, test voltage for 1 min (V)	-	N/A
	- control circuits, test voltage for 1 min (V)	-	N/A
8.3.3.2. 2	Application of test voltage		-
1)	with circuit-breaker in the closed position		-
	- between all live parts of all poles connected together and the frame of the circuit-breaker.	-	N/A
<u></u>	- between each pole and all the other poles connected to the frame of the circuit-breaker	-	N/A
2)	with the circuit-breaker in the open position and, additionally, in the tripped position, if any.	-	N/A
	- between all live parts of all poles connected together and the frame of the circuit-breaker.	-	N/A
	 between the terminals of one side connected together and the terminals of the other side connected together. 	-	N/A

Page 50 of 82 TLZJ24071660125

	EN 60947-2	
b)	Control and auxiliary circuits	-
1)	- between all the control and auxiliary circuits which are not normally connected to the main circuit, connected together, and the frame of the circuit- breaker.	N/A
2)	 where appropriate, between each part of the control an auxiliary circuits which may be isolated from the other parts during normal operation and all the other parts connected together. 	N/A
	No unintentional disruptive discharge during the test's	- N/A
8.3.3.2	For circuit-breaker suitable for isolation, the leakage current shall be measured through each pole with the contacts in the open position, at a test voltage of 1,1 Ue, and shall not exceed 0,5mA.	N/A
8.3.3.3	Mechanical operation and operational performance capability	-
8.3.3.3. 2	Construction and mechanical operation	-
2 a)	Construction	-
	A withdrawable circuit-breaker shall be checked for the requirements stated in 7.1.1	- N/A
	A circuit-breaker with stored energy operation shall be checked for compliance with 7.2.1.1.5, regarding the charge indicator and the direction of operation of manual energy storing	N/A
b)	Mechanical operation A circuit-breaker with dependent power operation shall comply with the requirements stated in	N/A
	7.2.1.1.3 A circuit-breaker with dependent power operation shall operate with the operating mechanism charged to the minimum and maximum limits stated by the manufacturer	N/A
	A circuit-breaker with stored energy operation shall comply with the requirements stated in 7.2.1.5 with the auxiliary supply voltage at 85% and 110% of the rated control supply voltage.	N/A
	It shall also be verified that the moving contacts cannot be moved from the open position when the operating mechanism is charged to slightly below the full charge as evidenced by the indicating device	N/A
	For a trip-free circuit-breaker it shall not be possible to maintain the contacts in the touching or closed position when the tripping release is in the position to trip the circuit-breaker	N/A
	If the closing and opening times of a circuit- breaker are stated by the manufacturer, such times shall comply with the stated values	- N/A
c)	Undervoltage releases	-
	Undervoltage releases shall comply with the requirements of 7.2.1.3 of Part 1. For this purpose, the release shall be fitted to a circuit-breaker having the maximum current rating for which the release is suitable	N/A

i)	EN 60947-2		
i)			
	Drop out voltage		-
·,	It shall be verified that the release operates to open the circuit-breaker between the voltage limits specified	-	N/A
	The voltage shall be reduced from rated voltage at a rate to reach 0 V in approximately 30 s	-	N/A
	The test for the lower limit is made without current in the main circuit and without previous heating of the release coil	-	N/A
	In the case of a release with a range of rated voltages, this test applies to the maximum voltage of the range	-	N/A
	The test for the upper limit is made starting from a constant temperature corresponding to the application of rated control supply voltage to the release and rated current in the main poles of the circuit-breaker		N/A
	This test may be combined with the temperature- rise test of 8.3.3.6	-	N/A
	In the case of a release with a range of rated voltages, this test is made at both the minimum and maximum rated control supply voltages	-	N/A
ii)	Test for limits of operation Starting with the circuit-breaker open, at the temperature of the test room, and with the supply voltage at 30% rated maximum control supply voltage, it shall be verified that the circuit-breaker		N/A
	cannot be closed by the operation of the actuator When the supply voltage is raised to 85% of the minimum control supply voltage, it shall be verified that the circuit-breaker can be closed by the operation of the actuator		N/A
iii)	Performance under overvoltage conditions		-
	With the circuit-breaker closed and without current in the main circuit, it shall be verified that the undervoltage release will withstand the application of 110% rated control supply voltage for 4 h without impairing its functions		N/A
d)	Shunt releases		-
	Shunt releases shall comply with the requirements of 7.2.1.4 of Part 1. For this purpose, the release shall be fitted to a circuit- breaker having the maximum rated current for which the release is suitable		N/A
	It shall be verified that the release will operate to open the circuit-breaker at 70% rated control supply voltage whren tested at an ambient temperature of + 55 °C + 2 °C without current in the main poles of the circuit-breaker		N/A
	In the case of a release having a range of rated control supply voltages, the test voltage shall be 70% of the minimum rated control supply voltage	-	N/A
8.3.3.3.	Operational performance capability without current.		-
3	current.

	U	Circuit-breaker for use on phase parthad systems		
C.2 Test of individual pole short-circuit breaking -	C 2			
capacity	0.2		-	

¥		
EN 60947-2		
A short-circuit test is made with a value of prospective current (Isu) equal to 25% of the ultimate rated short-circuit breaking capacity (leu)		-
 Type designation or serial number		-
 Sample no:		-
 Rated current: In (A)		-
Rated operational voltage: Ue (V)		-
Rated ultimate short-circuit breaking capacity: (kA)		-
Rated control supply voltage of closing mechanism: Uc (V)		-
Rated control supply voltage of shunt release: Uc (V)		-
The test sequence of operations is O -1 - CO		-
For circuit-breaker fitted with adjustable releases, test shall be made with the current and time settings at maximum.	-	N/A
closing mechanism energized with 85% at the rated Uc: (V)		N/A
The circuit-breaker is mounted complete on its		N/A
 own support or an equivalent support.		
Test made in free air:		N/A
Distances of the metallic screen's: (all sides)		N/A
The characteristics of the metallic screen:		
- woven wire mesh		N/A
- perforated metal		N/A
- expanded metal		N/A
- ratio hole area/total area: 0,45-0,65		N/A
- size of hole: <30mm ²		N/A
- finish: bare or conductive plating		N/A
Test made in specified individual enclosure: Details of these tests, including the dimensions of the enclosure:		N/A
Fuse "F": copper wire: diameter 0,8 mm, 50 mm long		N/A
Circuit is earthed at: (load-star- or supply-star point)		N/A
Conductor cross-sectional area (mm ²):		N/A
If terminals unmarked: line connected at: (underside/upside)		N/A
Tightening torques: (Nm)		N/A
Test sequence of operation: O -1 - CO		-
 Test circuit according figure: 9		N/A

	test voltage U/Ue = 1,05 (V)	N/A
	L3:	-
	short-circuit test current (Isu): equal to 25% of the ultimate rated short-circuit breaking capacity (leu)	N/A
	- r.m.s. test current AC/DC: (A):	N/A
	power factor/time constant:	N/A
	- Factor "n"	N/A
	- peak test current (Amax):	N/A
	Test sequence "O" L1	
	- max. let-through current: (kApeak)	N/A
	- Joule integral I ² dt (A ² s)	N/A
	Pause, t: (min)	N/A
	Test sequence "CO" L1	
	- max. let-through current: (kApeak)	N/A
	- Joule integral I ² dt (A ² s)	N/A
	Test sequence "O" L2	
	- max. let-through current: (kApeak)	N/A
	- Joule integral l ² dt (A ² s)	N/A
	Pause, t: (min)	N/A
	Test sequence "CO" L2	
	- max. let-through current: (kApeak)	N/A
	- Joule integral I ² dt (A ² s)	N/A
	Test sequence "O" L3	
	- max. let-through current: (kApeak)	N/A
	- Joule integral l ² dt (A ² s)	N/A
	Pause, t: (min)	N/A
	Test sequence "CO" L3	
	- max. let-through current: (kApeak)L3:	N/A
	- Joule integral l ² dt(A ² s)	N/A
	Melting of the fusible element	N/A
	Holes in the PE-sheet for test sequence "O"	N/A
	Cracks observed	N/A
C.3	Verification of dielectric withstand	IN/A
0.5	- equal to twice the rated operational voltage with a	N/A
	minimum of	N/A
	- no breakdown or flashover	N/A
C.4	Verification of overload releases	-
	The operation of overload releases shall be verified	-
	at 2.5 times the value of their current setting on each	
	pole separately.	
	The operating time shall not exceed the max. value	-
	stated by the manufacturer for twice the current	
	setting at the reference temperature, on a pole singly.	
	Time specified by the manufacturer:	-
	- Operation time: (s)L1:	N/A
	L2: L3:	
Annex H	Individual pole short-circuit test sequence	-
	Circuit-breaker for use in IT systems	-
H.2	Test of individual pole short-circuit breaking capacity	-
	A short-circuit test is made on the individual poles of	-
	a multipole circuit-breaker at a value of prospective	
	current $(I _T)$ equal to 1,2 times the max. setting of the	

	Page 81 of 82	TLZJ24071660125
	short-time delay release tripping current or, in the	
	absence of such a release, 1,2 time the max. setting	
	of the tripping current of the instantaneous release,	
	or, where relevant 1,2 times the max. setting of the	
	definite time delay release tripping current, but not	
	exceeding 50kA. Type designation or serial number	
	Sample no:	-
	Rated current: In (A)	-
	Rated operational voltage: Ue (V)	-
	Rated ultimate short-circuit breaking capacity: (kA)	
	Rated control supply voltage of closing mechanism:	
	Uc (V)	
	Rated control supply voltage of shunt release: Uc (V)	-
	or, where relevant 1,2 times the max. setting of the	
	definite time delay release tripping current, but not exceeding 50kA.	
	- r.m.s. test current AC/DC: (A)	P
	power factor/time constant:	P
	- Factor "n"	P
	- peak test current (Amax):	P
	Test sequence "O" L1	
	- max. let-through current: (kApeak) I 1-	P
	- Joule integral I ² dt (A ² s) I 1-	P
	Pause, t: (min) Test sequence "CO" L1	P
	max let through current: (kApaak)	Р
	- max. let-through current: (kApeak) / V - Joule integral l ² dt (A ² s)I	Р
	Test sequence "O" L2	-
	- max. let-through current: (kApeak)I?-	P
	- Joule integral l ² dt (A ² s) I?-	Р
	Pause, t: (min)	P
	Test sequence "CO" L2	
	- max. let-through current: (kApeak) I?-	P
	- Joule integral l ² dt (A ² s) l?-	P
	Test sequence "O" L3	
	- max. let-through current: (kApeak)IS	P
	- Joule integral l ² dt (A ² s)IS	P
	Pause, t: (min)	P
	Test sequence "CO" L3	-
	- max. let-through current: (kApeak)I 3*	P
	- Joule integral I ² dt (A ² s) I 3"	P
	Melting of the fusible element	No P
	Holes in the PE-sheet for test sequence "O"	No P
	Cracks observed	No P
H.3	Verification of dielectric withstand	
	- equal to twice the rated operational voltage with a minimum of	P
	- no breakdown or flashover	No P
	- the leaking current for circuit-breaker suitable for	Р
	isolation: (<6mA/1,1 Ue)	

	Page 82 of 82	TLZJ240716	TLZJ24071660125	
H.4	Verification of overload releases		-	
	The operation of overload releases shall be verified		-	
	at 2.5 times the value of their current setting on each			
	pole separately.			
	The operating time shall not exceed the max. value		-	
	stated by the manufacturer for twice the current			
	setting at the reference temperature, on a pole			
	singly.			
	Time specified by the manufacturer:		Р	
	- Operation time: (s)L1:		Р	
	L2:			
	L3:			
H.5	Marking		-	
	Circuit-breaker for which all values of rated voltage	Compliance	Р	
	have not been tested according to this annex or are			
	not covered by such testing, shall be identified by			
	the symbol which shall be market on the circuit-		-	
	breaker immediately following these values of rated voltage
