

## YCX7 Series

The connection adopts sparerib type copper bar, cover heat shrinkable tube and add insulation board, so the operator will not be in direct contact with the live part, the protection grade reaches IP54.

Multiple protective door panels make it safer for operators to use the switch.

N and PE bar under large current, using special copper bar, after special processing, to ensure that the capacity to meet user requirements.

Flexible door hinges ensure maximum opening Angle of the outer door for easy operation. The connecting screw between the frame edge and the box body can facilitate the box body to be installed separately.

The door panel is grounded with a copper grounding wire. Ensure that the grounding resistance meets technical requirements.

Door lock: ABS plastic internal door lock, strong applicability, easy to operate, beautiful and generous.

Multi-function main switch decoration board, reasonable structure, not only beautiful appearance, but also in the process of operation to prevent human body electric shock.

Multi-function main switch decoration board, the main switch can be replaced at will.

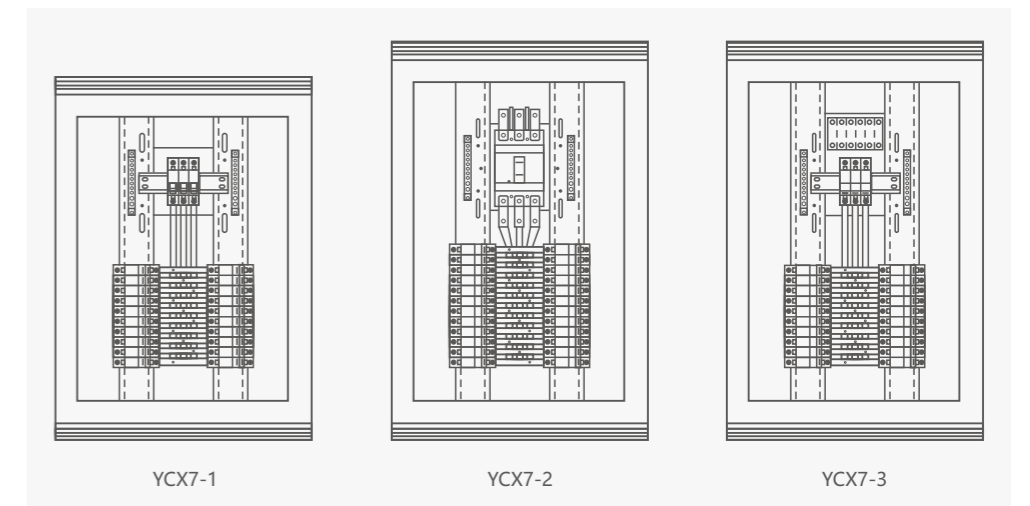

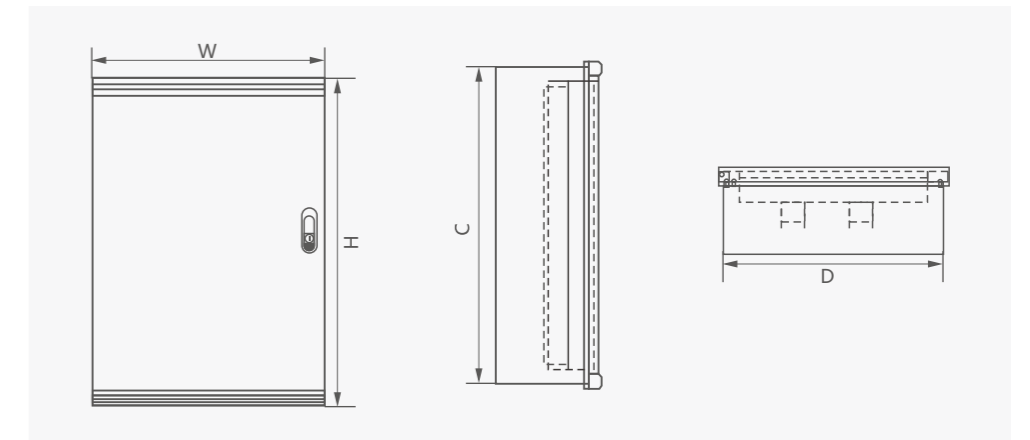

## YCX7 Series

### General

1. Reasonable structure: spacious wiring space, large volume, multi-layer protective partition main switch using multi-functional decorative board, the main switch can be replaced at will, ABS plastic internal door lock, can prevent electric shock.
2. Stable performance: the connection adopts sparerib type copper bar, cover heat shrinkable tube and add transparent PC board.
3. Operation safety: multi-layer protective partition, so that the operator and live part isolated, each layer of door panel is connected to the floor row, to ensure the safety of the operator.
4. Convenient disassembly and assembly: box body and safety bracket, inner door, outer door, etc. can be taken out separately at will. Let the box be buried first. Ensure that the components in the distribution box are installed at one time to avoid damage.
